EDUCATION

Columbia University

New York, NY

M.S. in Data Science, GPA: 4.17/4.0

Exp Dec 2025

- Courses: Applied Machine Learning, Database Management Systems, Algorithms for Data Science, Computer System

The Hong Kong University of Science and Technology (HKUST)

Hong Kong

B.S. in Data Science and Technology, **First Class Honors**, GPA: 3.96/4.3(Top 1%)

July 2024

- Courses: Object-Oriented Programming & Data Structures, Algorithms, Machine Learning, Computer Networks
- Honors: Academic Achievement Medal (Top 1% of Graduating Class), HKSAR Scholarship, Dean's List

SKILLS

- **Programming Languages**: Python, Java, C++/C#, JavaScript, SQL, R, HTML5/CSS
- **Frameworks**: Flask, FastAPI, Node.js, Express.js, Vue.js, React, AngularJS, Django
- **Data & Machine Learning Tools**: NumPy, Pandas, Matplotlib, Seaborn, Scikit-Learn, TensorFlow, PyTorch
- **Others**: MySQL/PostgreSQL, SQLite, MongoDB, AWS/GCC, Git/GitHub, Docker, BeautifulSoup/Selenium

PROFESSIONAL EXPERIENCE

TAL Education Group

Beijing, China

Machine Learning Engineer Intern

May 2023 - Aug 2023

- Developed an automated data pipeline in Python for processing over 20,000 HR records, incorporating robust data cleansing and transformation practices that improved data quality and consistency for machine learning models.
- Built and optimized machine learning models, including Neural Networks, XGBoost, Random Forest, to predict employee commitment, resulting in a 15% reduction in mean absolute percentage error through cross-validation.
- Analyzed model results and identified key factors using feature importance; delivered insights through Tableau dashboards to leaders, improving decision-making processes for employee evaluation.
- Fine-tuned a reward model for Generative AI (MathGPT) to solve math problems using question-answer pairs, with a focus on hyperparameter tuning and architectural adjustments, achieving a 2% increment on the re-rank metrics.

CSE Department, HKUST

Hong Kong

Teaching Assistant

Feb 2022 - May 2022

- Supported 90 students in COMP-Programming with C++ by holding Q&A sessions and grading their assignments.

RESEARCH EXPERIENCE

Course Recommendation System Development

June 2023 - May 2024

- Led a team of 4 to develop a personalized course recommendation platform using a Graph Neural Network (GNN).
- Trained and fine-tuned a heterogeneous graph neural network (HetGNN) for course grade prediction using PyTorch, improving the model prediction accuracy by 20%.
- Developed a user interface using Vue.js, incorporating responsive layouts and visually engaging elements to enhance user experience and accessibility.
- Engineered RESTful APIs using Express.js to serve real-time course recommendations based on user preferences, utilizing MySQL for fast and efficient data querying.

Language Model Evaluation by Natural Language Processing

May 2023 - Aug 2023

- Developed a nine-dataset evaluation framework to assess language model performance in the financial domain.
- Compared the performance of encoder-only language models vs. decoder-only language models (BERT vs. GPT).
- Investigated the efficacy of in-context learning for ChatGPT with different sample selection strategies, finding that in-context learning is more effective for complex tasks.

Interactive Data Storytelling in VR

May 2022 - Sept 2022

- Architected and implemented a VR-based interactive platform in Unity, improving user situation awareness of health risks by 50% compared with traditional desktop presentations.
- Developed C# scripts for complex user interactions and physics simulations within the VR world, allowing users to interact with real-time data visualizations in an immersive environment.
